# ThingLogix Workwatch- get back to work safely

## Workplace Solutions for the New Normal

### Introduction

With a workplace solution you can:

- Manage your policies in one place
- Apply sensors to policies
- Manage alarms and alerts
- Reduce risk
- Gain visibility into the effectiveness of your policies
- Gain control over your technology assets
- Integrate with your facility management systems
- Integrate with your personnel directory systems
- Develop reports
- Manage shifts
- Manage employees and students
- Manage multiple locations

### Challenges

- Incorporate pre-screening and thermal screening into our security checkpoints.
- Want employees to have minimal contact with visitors and other employees.
- Need to make sure everyone entering our facility has completed a symptom survey
- Alert our people to observe social distancing rules and we need the ability to know who may have been exposed if someone tests positive for COVID.

### Solution

- Workwatch provides a complete system to support the automation and reportability of back to work compliance efforts. It allows hardware and software from point solutions to be managed in single pane view.
- Workwatch integrates cameras, QR code readers, RFID readers, Bluetooth, Ultra-wide band and other technologies.
- Integrations with existing enterprise systems are simple using the Workwatch API. These can be used to pull employee records, interface with door lock controllers and a variety of other uses.

### Features/Results

- Workwatch supports multiple entry and screening workflows to meet customer needs and policy requirements.
- Workwatch can be run as a kiosk or as a completely autonomous screening station.
- Daily symptom surveys are a method companies are advised to use to encourage employees and guests to self-assess. Automated surveying ensures people complete the survey before a pass is issued.
- Workwatch supports multiple contact tracing and social distancing hardware options.
- Workwatch has work management available out of the box! Keep records and logs of when tasks are completed.
- Workwatch was built as a time and attendance solution to get people in and out quickly and safely, while keeping a record of who is coming and going.
